3. **Competitive Service Analysis and Limitations**
4. **MYPOOL and GANADARA Services: The Global AI Data Pipeline**
5. **GANADA TOKEN: Tokenomics**
6. **Team Members**
7. **Roadmap**
8. **Disclaimer**

1. Preface

1-1. Project Overview

The GANADA Token (GNDK) project is a Web3 education and data ecosystem that evolves beyond the innovative paradigm of 'Proof of Learning' to become a 'Decentralized Global AI Data Hub.'

This project introduces a token that simultaneously connects two language education platforms developed and operated by the Korean enterprise eKYSS Co., Ltd.: 'MYPOOL,' a foreign language learning service for Koreans, and 'GANADARA,' a Korean language learning service for a global audience.

GNDK aims to become a digital asset that definitively guarantees a practical payment value ($1), going far beyond simple in-app points. Furthermore, by establishing a D2E (Data-to-Earn) ecosystem based on the massive volume of language learning data to be generated by over 30 million potential global users, it bridges the gap between global AI Big Tech companies and learners.

Learners on MYPOOL and GANADARA engage in various in-app learning activities—such as completing lessons, participating in quizzes, interacting within the community, and contributing to content creation—and earn GANADA Tokens as a fair reward for their efforts.

We aim to build a decentralized learning ecosystem where all participants share and grow together, moving beyond the existing Web2 structure where the platform monopolizes the value generated during the learning process.

The token symbol, GNDK, is a combination of ‘GANADA’—the foundation of the Korean alphabet—and ‘K’, representing Korean people and K-Culture. It symbolizes the project’s philosophy of extending the holistic value of Korean culture into the global Web3 learning ecosystem, moving beyond mere language education.

1-2. Vision and Goals

The vision of the GANADA Token project is to fully return the value of learning and data, previously monopolized by legacy platforms, back to the users. While resolving the limitations of existing Web3 utility tokens that are vulnerable to price volatility, GNDK simultaneously establishes sovereignty over 'Human Interaction Data'—the most powerful resource in the upcoming AI era.

GNDK fundamentally resolves the limitations of existing Web3 utility tokens, which are vulnerable to price volatility. Within the MYPOOL and GANADARA ecosystems, 1 GNDK is always guaranteed a Minimum Pegged Value of $1. Users will experience a 'true Proof of Learning currency' that allows

them to either liquidate their earned achievements on the global market (DEX) or utilize them at a 1:1 ratio for premium ecosystem services.

However, if the market price of 1 GNDK falls below $1, MYPOOL and GANADARA will value 1 GNDK at $1, allowing users to pay for course subscriptions accordingly. If the market price of 1 GNDK exceeds $1, the subscriptions can be purchased using the higher, converted market price. Therefore, 1 GNDK is guaranteed a minimum value of at least $1 within the MYPOOL and GANADARA ecosystems. Through this, the main goals of the GNDK token are as follows:

1) Guaranteed Value of Learning Rewards: Regardless of the extreme volatility of the cryptocurrency market, we guarantee the minimum value of the learning rewards users have earned through their time and effort. This provides stability to users, ensuring long-term and continuous learning motivation.

2) Strong Price Defense via Arbitrage: If the market price of GNDK falls below $1, users will have a strong economic incentive to buy GNDK cheaply on exchanges instead of using credit cards, to pay for in-app services (where it is valued at $1). This voluntary buy pressure acts as a core mechanism to defend the token price from dropping.

3) Maximizing Upside Potential for Users: We do not merely guarantee a minimum payment value ($1). If the ecosystem grows and the market price of GNDK exceeds $1, we fully recognize that excess market value for in-app payments. This ensures that users and holders can fully enjoy the economic benefits of token appreciation.

4) Completing a Sustainable L2E Ecosystem Based on Real-world Payments: GNDK is not merely a speculative asset or a token meant only for cashing out. Based on clear real-world utilities such as MYPOOL and GANADARA premium subscriptions, 1:1 tutoring, and partner product payments, we establish a self-sustaining token economy where an endless cycle of 'Earn, Spend, Burn, and Recycle' occurs.

5) Completion of the Global AI Data Marketplace (D2E) : We establish a sustainable token economy by supplying high-quality multilingual data (voice, conversation, translation) collected during the learning process to global AI companies, and returning the generated revenue back to the ecosystem.

2. Market Analysis and Background for L2E Ecosystem Expansion

2-1. Analysis of the Online Language Learning Market

1) Growth of the Global Online Language Learning Market

- Since the COVID-19 pandemic, demand for non-face-to-face education has surged, and the advancement of mobile technology has established app-based learning—unrestricted by time and location—as the mainstream.
- According to the market research firm Grand View Research (GVR), the online language learning market size is approximately $22.1 billion (around 31 trillion KRW) in 2024, with an estimated size of approximately $54.8 billion (around 77 trillion KRW) by 2030, showing explosive growth driven by accelerating digital transformation and users' preference for flexible learning methods.

This spread of non-face-to-face and mobile-based learning contributes to the overall expansion of language learning demand, not limited to a specific language.

2) Rise of User-Centric Learning Models

Personalized learning based on user behavior data is becoming the core competitive advantage in online language learning.

- Personalized content recommendations based on learning progress
- Introduction of game elements such as quests and badges
- Expansion of self-study and instant feedback structures
- Increase in global user communities

This suggests that language learning is shifting from a 'knowledge transfer industry' to a 'user experience-based service industry,' which naturally creates a point of contact with Web3 reward-based learning.

3) Full-Scale Competition in Multilingual Learning Platforms

In the global market, the expansion of multilingual learning services, not just core languages, is accelerating. A structure that allows users to learn and switch between multiple languages on a single platform plays a crucial role in ensuring user convenience and learning persistence.

- Increase in platforms expanding from a primary language to multilingual packages
- Diversification of content types, including video, culture, and real-time tutoring
- Establishment of a structure that can rapidly respond to fluctuations in demand for specific

languages

These changes are not merely limited to the external growth of the market; they demonstrate that a cyclical structure of 'user participation → data accumulation → continuous learning → value return' is emerging as the core competitive advantage. MYPOOL and GANADARA, which have already secured 80,000 members, possess the foundation to realize this structure. GANADA TOKEN combines this with a Web3 reward structure to secure the scalability to implement the 'return of participation value' that existing Web2 platforms have failed to satisfy.

4) The Exploding AI Data Market and its Bottlenecks

The core of the global AI (Large Language Model, LLM) competition has shifted from parameter size to securing 'high-quality data.' AI companies have faced the limitations of one-dimensional data collection via web scraping and are experiencing the following critical bottlenecks:

- **Lack of High-Quality Multilingual/Multimodal Data:** There is an absolute shortage of refined text, voice data containing natural accents, and video data for languages other than English.
- **High-Cost Structure of RLHF (Reinforcement Learning from Human Feedback) Data:** The process of humans directly evaluating and correcting AI responses requires astronomical costs and time.
- **Shortage of Conversational Corpus with Natural Context:** There is a desperate need for natural language conversational data based on an 'Agentic Workflow' created by actual human interaction in specific situations, rather than mechanical sentences.

5) The Perfect Integration of L2E and the AI Data Market (D2E)

Language learning apps are the 'most perfect data factories' capable of fulfilling these needs of the AI market. In the process of learning a foreign language, learners inevitably record numerous voices, translate sentences, and converse with chatbots. MYPOOL and GANADARA refine these users' learning activities into anonymized, high-quality data and construct a data ecosystem based on the concept **of** DePIN (Decentralized Physical Infrastructure Network)**,** directly rewarding users who opt-in to provide data with GNDK.

2-2. Analysis of the Korean Language Learning Market

1) Global Interest in Korean Language Created by the Spread of K-Content

The worldwide spread of K-Culture (K-Pop, K-Drama, K-Food, etc.) is causing an explosive increase in the demand for Korean language learning.

- Increased global consumption of Hallyu content such as K-Dramas, K-POP, and K-Beauty/Fashion
- Rapid increase in accessibility to Korean content due to the spread of OTT platforms like Netflix and Disney+
- Activation of global fandom communities based on SNS and YouTube
- Maximized exposure and interest in Korean language through BTS, BLACKPINK, Squid Game, etc.

2) The Fastest-Growing Language

- According to the market research institution Global Market Insights (GMI), the size of the global Korean language learning market is approximately $720 million (around 1 trillion KRW) in 2024, and is expected to show an explosive annual average growth rate (CAGR) of approximately 25.1% to reach a market size of $6.7 billion (around 9.5 trillion KRW) by 2034.
- According to Duolingo, the world's No. 1 language app, the Korean language grew by 387% over the past 5 years, recording the highest growth rate among all languages worldwide. 2) Voluntary Learning (Motivation) Led by K-Culture

3) Voluntary Learning (Motivation) Led by K-Culture

- While the purpose of traditional language learning was 'employment/immigration,' for Korean, cultural interest such as K-Pop and K-Drama is the primary motive for learning, acting as a powerful catalyst that leads to actual learning, not mere interest.
- This suggests that GANADA TOKEN's L2E (Learn-to-Earn) model, which combines 'fun' and 'reward,' is the optimal environment for gathering genuine users.

4) Market Restructuring Centered on Online/Mobile

- The proportion of app-based online learning is rapidly increasing compared to offline academies, and especially given the nature of Korean language learning being centered around the MZ generation, the rejection of GANADA TOKEN and AI Tutors is low and acceptance is high.

5) Factors Expanding the Real Demand for the Korean Language Learning Market

Interest in the Korean language is leading to actual learning demand due to various practical factors. These factors are the core drivers that are establishing Korean language learning as a global education market with practical purposes, beyond a simple hobby stage.

- **Expansion of the TOPIK exam:** Conducted in 87 countries, with a continuous increase in test-takers.
- **Increase in real demand for employment, study abroad, and visas:** Expansion of Korean companies' and educational institutions' global presence.
- **Increase in demand for travel to Korea:** Increase in visitors → Strengthening the need for basic conversation learning before travel.
- **Growth of the mobile learning environment:** Spread of smart learning and app-based learning, centered in Southeast Asia and Latin America.

The Korean language learning market is a high-growth market combining the spread of K-Content, a rapid increase in demand, and the expansion of the mobile learning environment. Notably, characteristics such as a high conversion rate from cultural interest to learning, long-term learning persistence, and a mobile-friendly user base are rarely seen in other language markets.

This environment provides the optimal setting for a Web3 learning ecosystem, based on user participation and contribution, to operate effectively. Therefore, placing the Korean language market at the center of the initial expansion strategy is the most rational choice for securing high efficiency and rapid growth potential.

2-3. Structural Limitations of Existing Web2 Learning Platforms

The Korean language learning market is growing rapidly, but most existing learning platforms operate on a Web2-based structure, which has the problem of user value being fixed and centered on the platform.

- **Absence of Reward:** No economic compensation for meaningful activities such as learning, quizzes, and community contributions.
- **Data Monopolization:** Learning data, content, and contribution information are all owned by the platform.
- **Lack of Learning Persistence:** Low long-term learning retention rate due to the absence of a reward structure.
- **Price Barrier:** Difficulty in providing the same access to global users due to differences in purchasing power by country.

These structural limitations do not sufficiently support user loyalty and learning persistence, which

are core values of language learning, and a new structure is required to solve them.

2-4. Necessity of a Web3-Based 'Contribution Value Return Model'

Unlike the expanding market size, existing platforms fail to provide a system that justly evaluates and compensates users' contributions. To solve this, a transparent and decentralized reward model based on Web3 is required.

- **Possibility of Contribution-Based Reward:** Compensation for value creation such as learning activity, participation amount, and UGC (User-Generated Content) with tokens.
- **Restoration of Data Sovereignty:** Learners secure ownership of their learning data and contribution to content creation.
- **Global Accessibility:** Mitigation of country-specific price, payment, and accessibility issues through wallet-based participation.
- **Ecosystem Scalability:** Participants directly contribute to the ecosystem's growth and share the rewards.

Ultimately, the limitations of Web2 platforms and the increasing global learning demand clearly demonstrate the need for a 'learning ecosystem where contribution equals value (Learn-to-Earn)'. GANADA TOKEN is designed with a tokenomics structure that satisfies these demands by connecting learning, participation, and data to economic value.

3. Competitive Service Analysis

3-1. Current Status of Major Korean Language Learning Platforms

The language learning market is dominated by various Web2-based learning platforms. Each service possesses strengths such as content, UI, and gamification, but they are all consumption-centric models that lack a reward structure for user contribution.

These major platforms are all Web2 structures focused on learning functions, and they do not provide economic compensation for learner contribution, community activity, or study time.

<Comparison of Korean General Learning Platforms>

Platform	Key Feature	Strength	Limitation
시원스쿨	A leading language online learning service in Korea	Systematic lecture curriculum, language diversity	Unilateral lecture focus, separate payment per language
Yanadoo	Mobile language learning focused on short-term motivation	Short lectures, motivation system	Unilateral lecture focus, separate payment per language
Speak	AI-Based speaking, pronunciation correction specialization	Strength in actual speaking practice, Mobile-optimized learning	Learning concentrated on English, focus biased towards pronunciation and conversation
말해보카	AI-Based vocabulary, sentence learning	Instant response-type learning based on words and sentences, motivation through character customization	Learning limited to English, focus on simple knowledge acquisition
REAL CLASS	Conversation video-based learning utilizing US drama/animation content	Curriculum focused on practical conversation, high accessibility for beginners	Learning limited to English

<Comparison of Global General Learning Platforms>

Platform	Key Feature	Strength	Limitation
Duolingo duolingo	World's largest language learning app	Gamification, high accessibility	No reward structure, low depth in Korean language, no TOPIK course
LingoDeer LINGODEER	Specialized Asian language learning app	Strong coverage of Korean, Chinese, and Japanese	Web2 subscription model, no contribution reward, no TOPIK course
Memrise MEMRiSE	Focus on repetition and vocabulary learning	Partially provides User-Generated Content (UGC)	Platform monopolizes data/contribution, no reward, no TOPIK course

Busuu	Global language learning SNS	Provides tutor correction and community features	Web2 model, no contribution reward, no TOPIK course
Drops	Visual-based vocabulary learning	Short learning sessions, strong UI	Weak continuous learning structure, no reward, no TOPIK course
TTMIK	Korean language specialized lectures/textbooks	Deepened curriculum	Web2 subscription model, no contribution reward
Eggbun	Chatbot-based Korean language learning	Excellent mobile accessibility	No Web3 structure, no activity reward, no TOPIK course
TEUIDA	Learn-by-doing based on Korean conversation videos	Practical conversation, features real actors	Weak community, no reward structure, no TOPIK course

3-2. Common Limitations of Web2-Based Competitive Services

Most existing platforms are based on the Web2 service model and fail to convert user contribution into tangible value.

- Absence of economic compensation for learning activities
- No value return for UGC such as reviews, quizzes, and community contributions
- Learning data, contribution, and achievements all belong to the platform's internal assets
- Accessibility limitations due to differences in purchasing power by country
- Low long-term learning retention rate due to lack of rewards Low long-term learning retention rate due to lack of rewards

This structure perpetuates the problem where learners contribute to the platform's growth but receive no compensation for it.

3-3. Market Gap Due to Absence of Web3/Reward-Based Learning Model

Even in the global education market, the Web3-based reward learning model is still in its early

stages, and specifically in the Korean language learning sector, such services are completely non-existent.

- There are Web3 examples in the exercise field, such as Move-to-Earn (M2E), but Learn-To-Earn (L2E) in the education field is in its initial introduction phase.
- Absence of a model that applies tokenomics, a reward system, and data sovereignty among Korean language learning platforms.
- Korean language learning + Web3 is a blue ocean without competition.

This means that MYPOOL·GANADARA + GANADA TOKEN can gain first-mover advantage in the market.

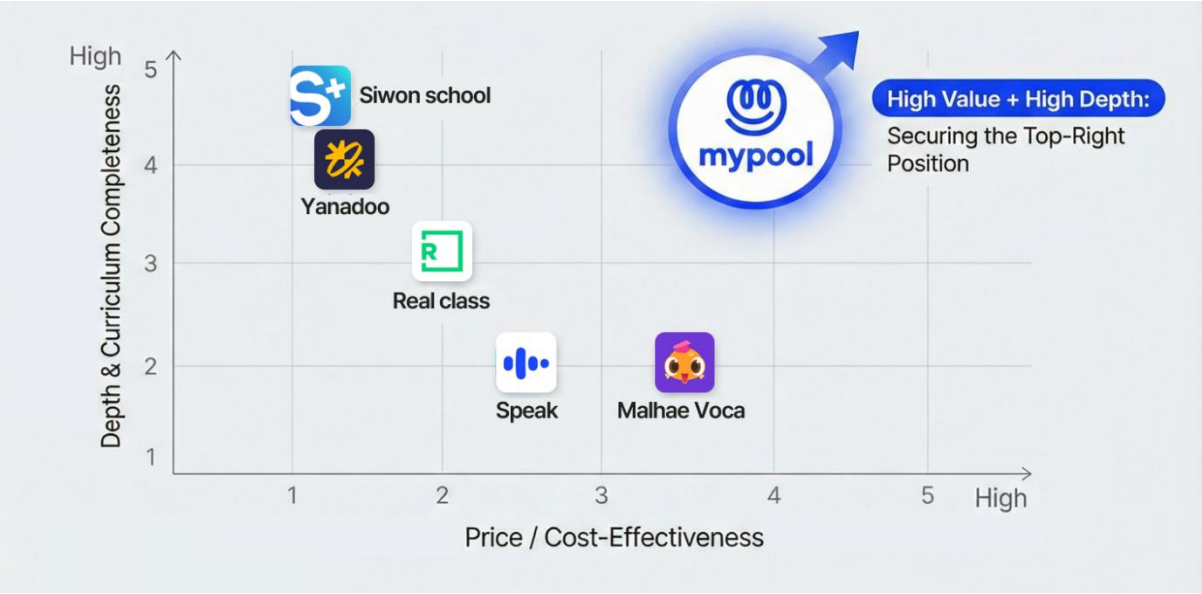
3-4. The Core Limitations of Web2 Platforms and the Dominance of GNDK

Existing EdTech competitors possess excellent UI/UX, but the core data generated by users (voice, translation patterns, learning behaviors) is monopolized by centralized platforms, thereby increasing only the corporate value. In contrast, the GANADA Token ecosystem returns "Data Sovereignty" to the users. If the data generated by learners within the app is sold to the external B2B market (e.g., AI research labs), a massive proportion of that revenue is immediately returned to boost the token's value (Buyback & Burn) and provide direct user rewards (Bounties). This is the disruptive innovation inherent to Web3 that competitors can never replicate.

- Learning, Quiz, Community Contribution → GANADA TOKEN Reward
- Transparent value distribution structure based on contribution
- Strengthening data sovereignty by shifting learning records, participation, and UGC to be user-centric
- Removal of barriers for global users through wallet-based participation
- Establishment of a participant-centric ecosystem beyond a platform-centric structure

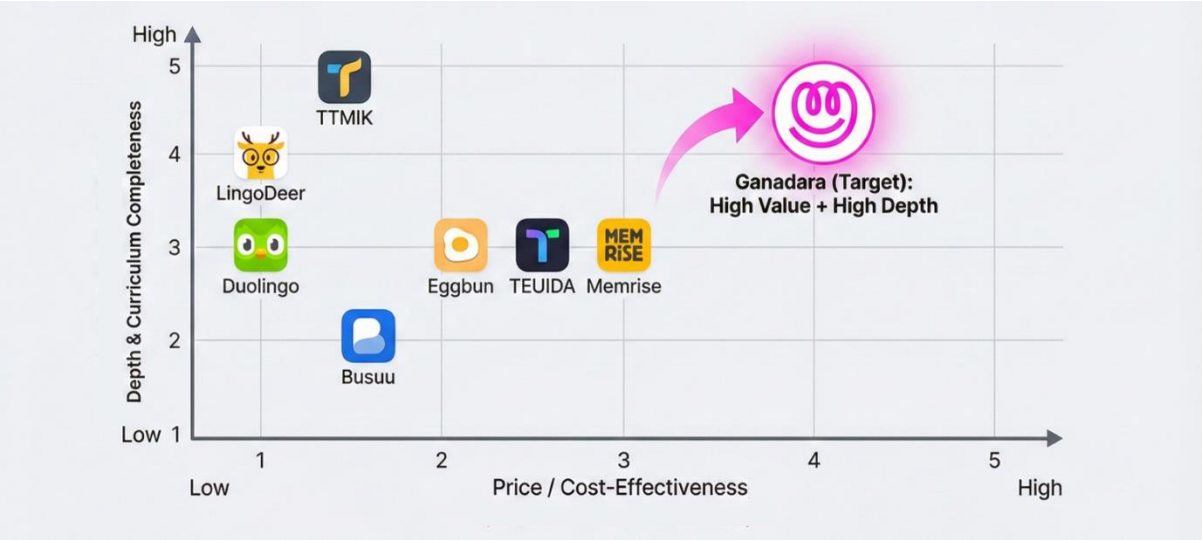
The following are position maps and a competitor comparison table visually showing that MYPOOL·GANADARA can secure the areas of 'High Learning Depth x High Value (Cost-Effectiveness)' and 'High Speaking Practice x High Gamification/Reward' compared to existing Web2 platforms.

<Position Map 1. MYPOOL - Learning Depth x Price/Cost-Effectiveness>



<Position Map 2. MYPOOL - Practical Speaking Focus x Gamification/Reward>

<Position Map 3. GANADARA - Learning Depth x Price/Cost-Effectiveness>



<Position Map 4. GANADARA - Practical Speaking Focus x Gamification/Reward>

<MYPOOL vs. Competitor Comparison>

Brand	mypool	시원스쿨	Yanadoo	Speak	말해보카
Target Learning Language	English, Chinese, Japanese, Spanish, Vietnamese, French, TOEIC 6 Languages + TOEIC Unlimited	20+ languages Separate billing by language	English-focused	English	English
Content	Video Lectures (Long-form, Short-form) + Exercise & Practice Smart learning, increased learning effectiveness	Quizzes Only (No video lecture)	Video lecture focus + Exercise(Speaking Only)	Video lecture focus + Exercise(Speaking Only)	Word Input Exercise Only (No video lecture)
Pricing	Learning contents by level and theme + Cultural contents + Exam preparation	Learning contents by level and theme + Cultural contents + Exam preparation	Learning contents by level and theme + Exam preparation	Conversation expression focused contents	Vocabulary and conversation expression focused contents
Number of Members & Revenue	Web3 Decentralized activities and reward structure	Web2 Centralized platform	Web2 Centralized platform	Web2 Centralized platform	Web2 Centralized platform
Brand	Activity rewards (GND)	No rewards	No rewards	No rewards	No rewards

<GANADARA vs. Competitor Comparison>

Brand	ganadara	duolingo	MEM RiSE	Busuu	TALK TO ME IN KOREAN
Target Learning Language	The leading AI-based language learning app, developed in Korea	Founded in 2011 (USA) 20+ languages	Released in 2010 (UK) 20+ languages	Released in 2008 (UK) 12 languages	Released in 2009 (Korea) Korean
Content	Video Lectures (Long-form, Short-form) + Exercise & Practice	Quizzes Only (No video lecture)	Quizzes, Short native-speaker video	Quizzes Only (No video lecture)	Video Lectures, Quizzes
Pricing	Practical Korean + Local cultural content + TOPIK preparation	Practical conversation–focused Weak cultural elements No TOPIK preparation	Practical conversation–focused Weak cultural elements No TOPIK preparation	Practical conversation–focused Weak cultural elements No TOPIK preparation	Practical Korean Local cultural content TOPIK preparation
Number of Members & Revenue	Web3 Decentralized activities and reward structure	Web2 Centralized platform	Web2 Centralized platform	Web2 Centralized platform	Web2 Centralized platform
Brand	Activity rewards (GND)	No rewards	No rewards	No rewards	No rewards

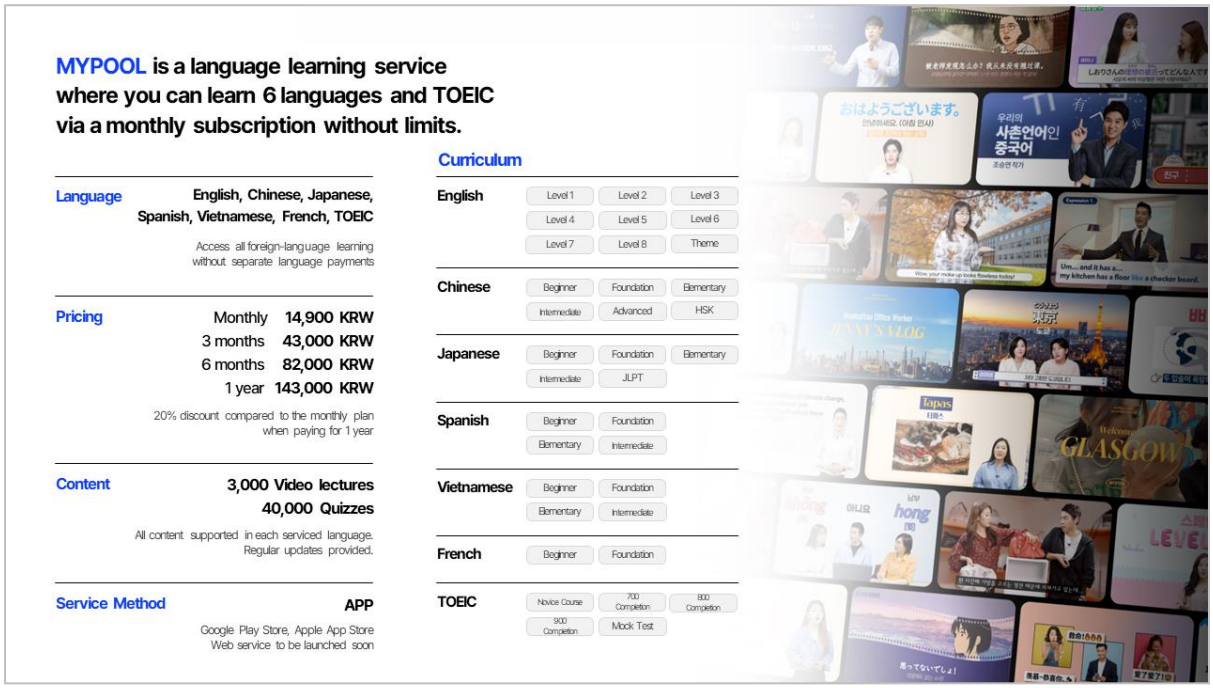
4. MYPOOL and GANADARA Services: Global AI Data Pipeline

4-1. MYPOOL Service Overview

'MYPOOL' is a multilingual integrated subscription platform, an AI·community-based language

learning platform where users can learn 6 languages and TOEIC without limit.

<MYPOOL Service Overview>



MYPOOL is a language learning service where you can learn 6 languages and TOEIC via a monthly subscription without limits.

Language	English, Chinese, Japanese, Spanish, Vietnamese, French, TOEIC Access all foreign-language learning without separate language payments
Pricing	Monthly 14,900 KRW 3 months 43,000 KRW 6 months 82,000 KRW 1 year 143,000 KRW 20% discount compared to the monthly plan when paying for 1 year
Content	3,000 Video lectures 40,000 Quizzes All content supported in each serviced language. Regular updates provided.
Service Method	APP Google Play Store, Apple App Store Web service to be launched soon

Curriculum

English	Level 1	Level 2	Level 3
	Level 4	Level 5	Level 6
	Level 7	Level 8	Theme
Chinese	Beginner	Foundation	Elementary
	Intermediate	Advanced	HSK
Japanese	Beginner	Foundation	Elementary
	Intermediate	JLPT	
Spanish	Beginner	Foundation	
	Elementary	Intermediate	
Vietnamese	Beginner	Foundation	
	Elementary	Intermediate	
French	Beginner	Foundation	
TOEIC	Novice Course	700 Completion	800 Completion
	900 Completion	Mock Test	

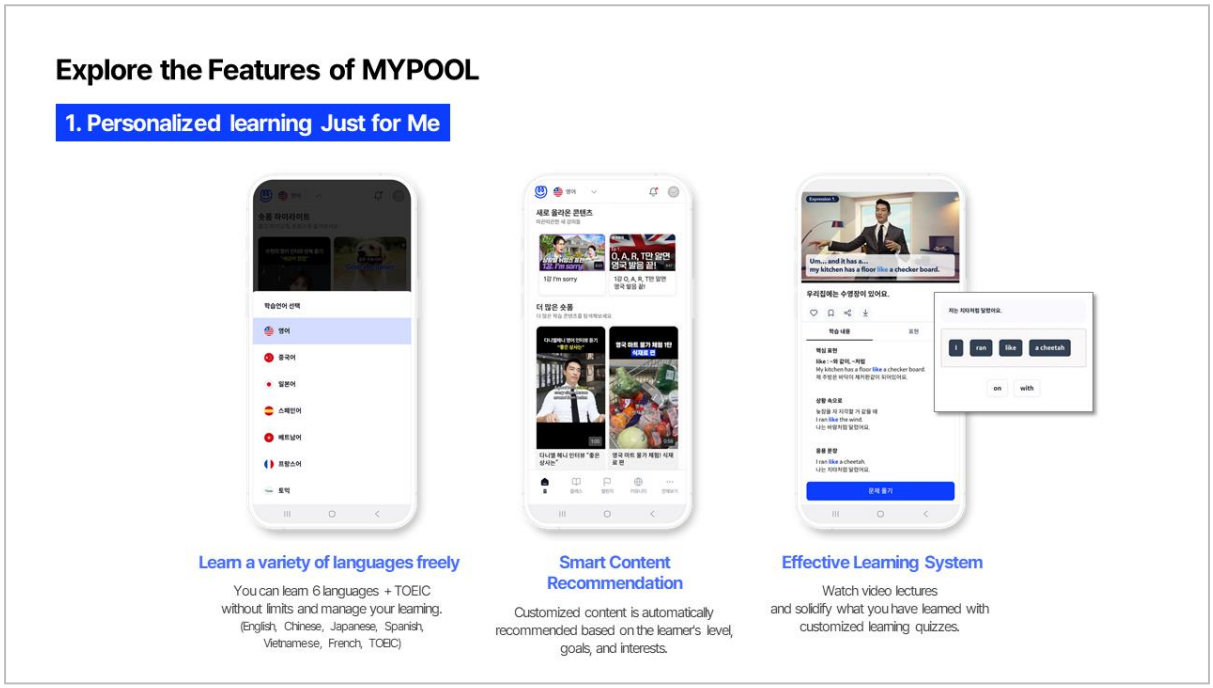
MYPOOL analyzes the learner's goals, level, and pattern to recommend optimal content, maximizing learning efficiency through a learning system that combines lecture viewing and problem-solving. It

provides a diverse learning environment that integrates practical conversation with AI characters, cultural content, and community communication.

- **Multilingual Unlimited Learning:** Learning of English, Chinese, Japanese, Spanish, Vietnamese, French, and TOEIC is possible without separate charging per language. Supports customized video lectures and quizzes optimized for learning level.
- **Systematic Curriculum:** Broad learning materials including regular courses, exam preparation, local cultural content, and short-form videos reflecting the latest trends.
- **Learning Motivation:** Provides continuous learning motivation through Microlearning-based lesson structure, missions, badges, and ranking systems.
- **AI-Based Personalization:** Provides a personalized learning roadmap through analysis of learning behavior.

MYPOOL aims for a knowledge subscription ecosystem that goes beyond simple rote education, allowing users to experience various languages at a reasonable cost and form self-improvement habits.

<MYPOOL Features>



Explore the Features of MYPOOL

2. Get motivated and have more fun

From Regular Learning to Short-Form

Add fun to systematic regular learning with light short-form content.

Challenge Missions and Ranking

Perform learning and missions and receive points. You can climb the rankings and collect badges.

Community for Asking and Sharing

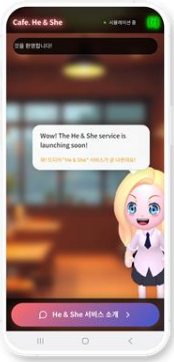
Ask questions, share your daily life, and follow inspiring users.

Explore the Features of MYPOOL

3. Learn smarter with AI

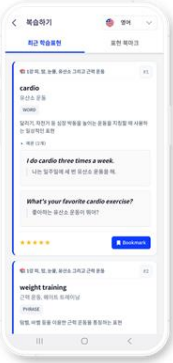
Gamification Learning

Learn languages like a game with your own personalized roadmap.



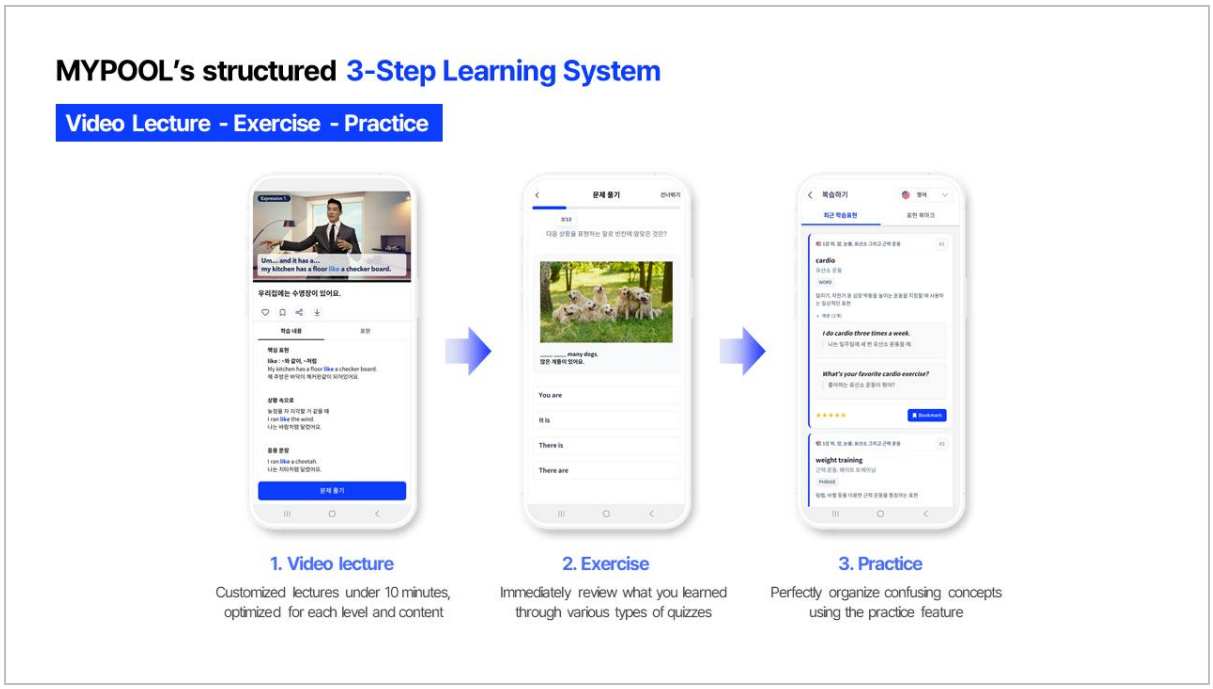
AI Chat & Real-time Translation

Practice foreign languages freely and expand your expressions with real-time translation.
(AI chat coming soon)



Smart Review Tool

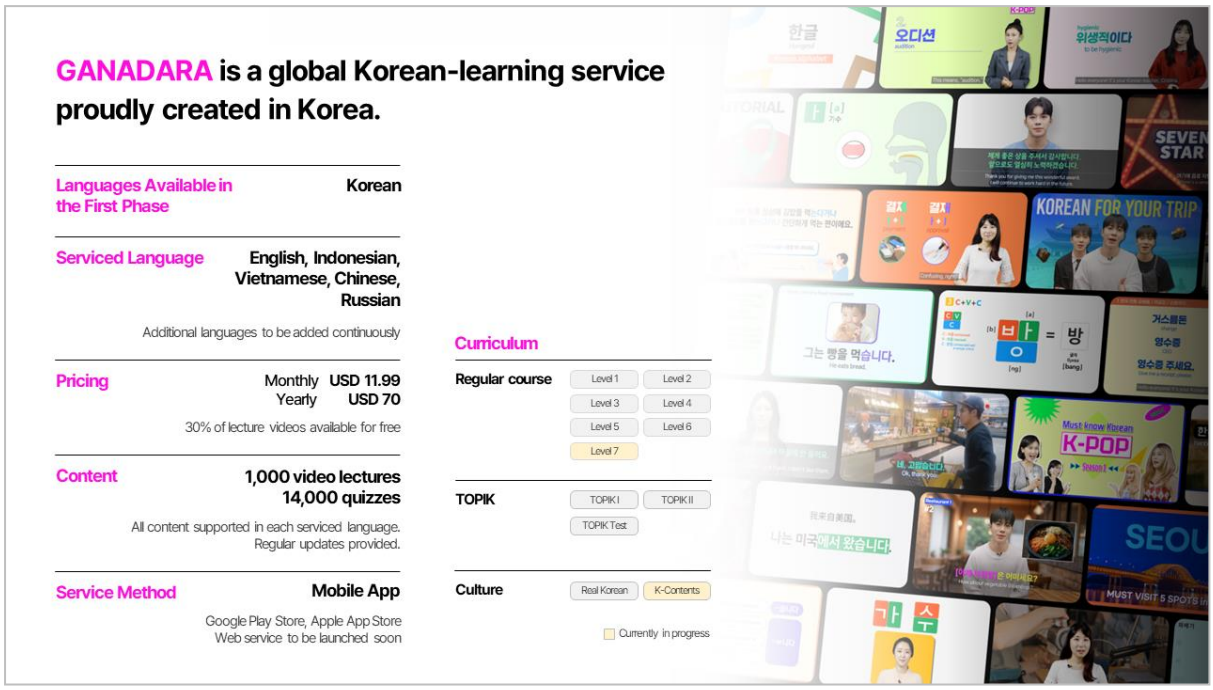
Learned expressions are automatically organized, and you can review efficiently with bookmarks.



4-2. GANADARA Service Overview

'GANADARA' is an AI·community-based Korean language learning platform that complements the limitations of existing global Korean language learning apps.

<GANADARA Service Overview>

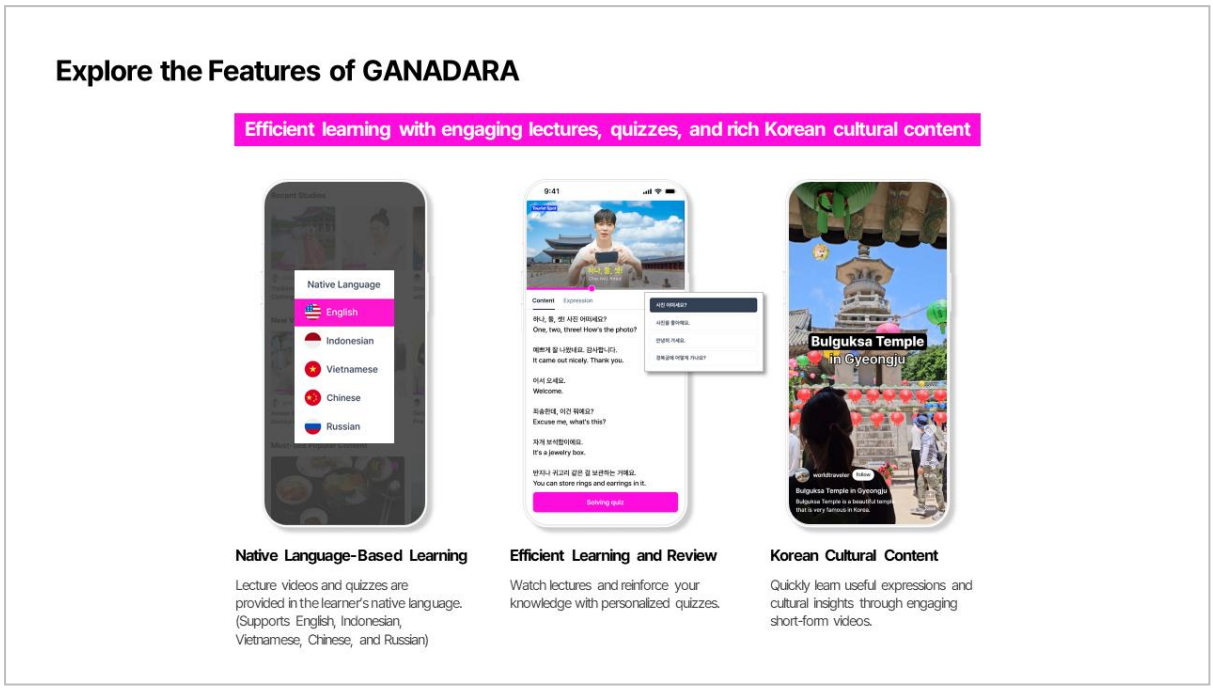


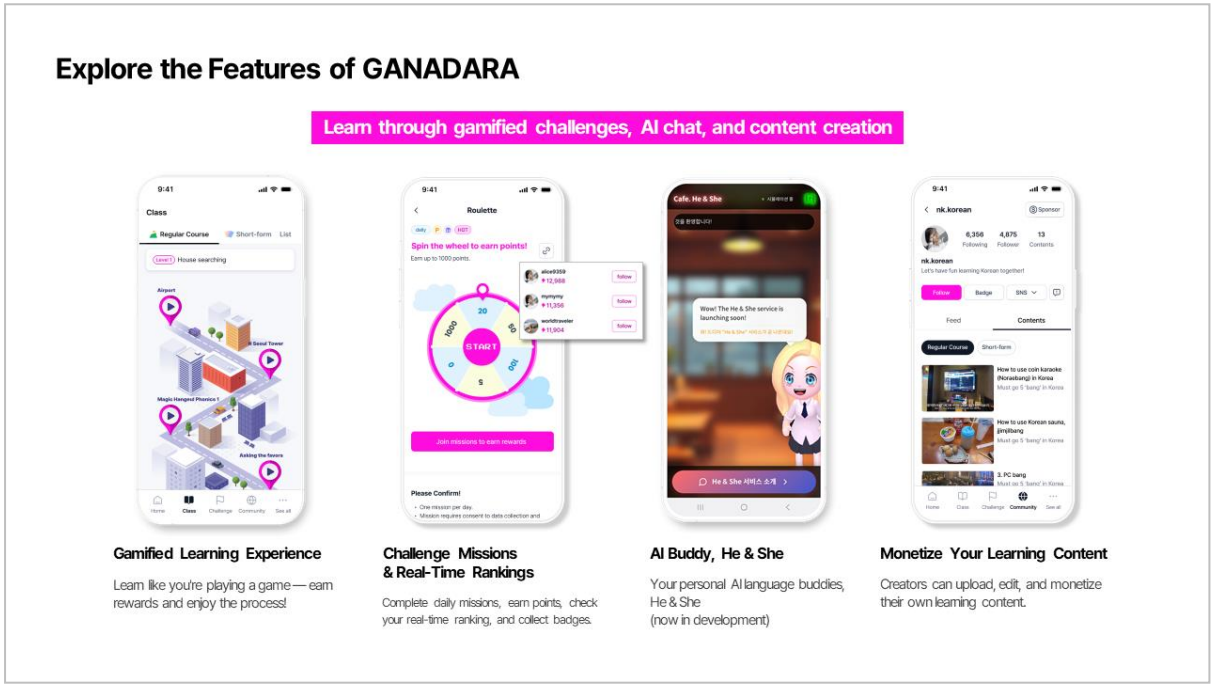
GANADARA analyzes the learner's goals, level, and pattern to provide a personalized curriculum, establishing an All-in-one learning environment that integrates practical conversation with AI characters, K-culture content, and community communication.

- **Native Language Customized Learning:** Customized video lectures and quiz support optimized for users of major languages including English, Indonesian, Vietnamese, Chinese, and Russian.
- **Comprehensive Curriculum:** Broad learning materials including regular courses, TOPIK preparation, local Korean culture content, and short-form videos reflecting the latest trends.
- **Learning Motivation:** Encourages continuous learning motivation through Microlearning-based course configuration, missions, badges, and ranking systems.
- **AI-Based Personalization:** Provides a personalized learning roadmap based on the analysis of learning behavior.

Unlike existing apps focused on fragmented learning, GANADARA comprehensively addresses the improvement of actual speaking ability, learning persistence, and cultural understanding.

<GANADARA Features>





4-3. Web3 Differentiation of MYPOOL and GANADARA

MYPOOL·GANADARA is the core platform where the GANADA TOKEN ecosystem operates, going beyond a simple learning tool.

- **Substantial Reward System (L2E):** Induces voluntary learning participation by rewarding learning achievements with GANADA TOKEN.
- **Community-Based Growth:** Social structure that increases participation, such as sharing daily life, encouraging others, and exchanging learning know-how.
- **NFT & Avatar:** Implements the digitalization and valuation of learning history through avatars that grow according to the learning level and the issuance of NFTs that prove learning achievements.

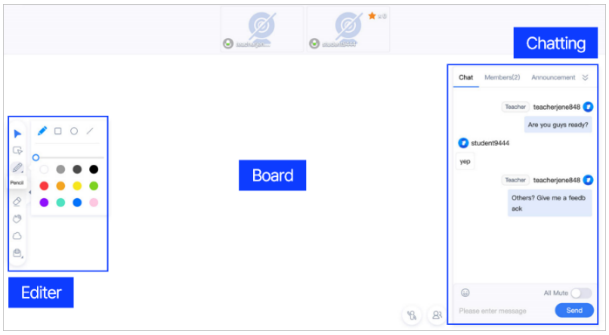
MYPOOL·GANADARA is the first Korean language learning platform to implement a contribution-based ecosystem (Learn-To-Earn), moving beyond the unilateral consumption model of Web2 platforms.

4-4. Features Under Development

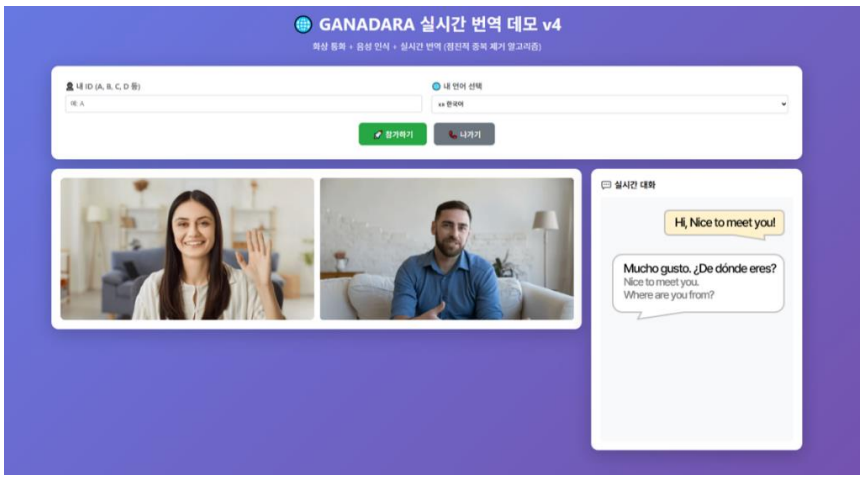
Through the 3.0 update, MYPOOL and GANADARA are developing the following innovative AI and social features, as well as AI data collection programs:".

- **Emotion Recognition AI Friend:** Users can naturally acquire the language by talking with an AI avatar that understands and reacts to emotions by analyzing the learner's voice tone. (Multi-modal Learning)

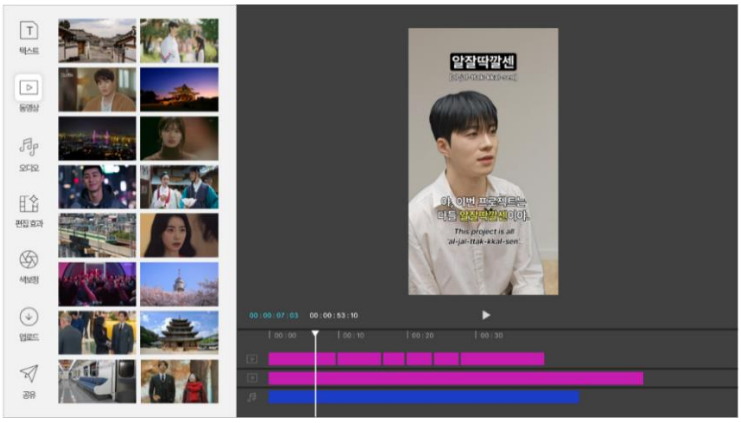
- **Real-time Live Classroom:** Users can experience live classes from tutors worldwide. Up to 10,000 simultaneous connections are possible with fast and stable speed.



- **Real-time Translation Conversation:** Users can talk with learners worldwide in real-time calls, with instantly translated subtitles provided through voice recognition.



- **AI Content Creating Tool (Creator Studio):** Provides a creator ecosystem where anyone can produce and upload short-form/long-form tutoring content to build a fandom and generate revenue.



MYPOOL·GANADARA provides the optimal user experience based on differentiated technology. Below is a comparison table of MYPOOL·GANADARA's core features against existing solutions.

<MYPOOL·GANADARA vs. Existing Competitors Core Feature Comparison>

Core Feature	mypool ganadara	Existing Competitors
Real-time Class	**Ultra-low latency 150ms, 10,000 simultaneous connections**	Simple video call (latency 500ms+)
AI Interaction	**Emotion recognition avatar (95% accuracy)**	Text-based chatbot
Content Creation	**AI automatic editing**	Manual editing (takes several hours)
Revenue Model	**Multiple monetization (Ads + Subscription + Sponsorship + NFT)**	Single subscription method
Community	**Fandom-based global ecosystem**	Forum bulletin board

- **Innovative AI Data Collection Program (D2E Marketplace)**

Moving beyond simple learning, MYPOOL and GANADARA 3.0 provide Agentic-based features designed to allow users to naturally produce the data demanded by global AI Big Tech companies.

(1) Voice-to-Earn (Multilingual Voice Multimodal Data Collection): When a user reads aloud K-Pop lyrics or famous K-Drama lines within the app, the system primarily evaluates noise and accent.

- This data, containing the actual pronunciation and accents of users from hundreds of countries worldwide, is utilized as an essential multimodal dataset for advancing global AI Speech-to-Text (STT) and Text-to-Speech (TTS) models. Participants receive premium GNDK bounties.

(2) Translate-to-Earn (Collective Intelligence Translation & RLHF Construction):

- Users translate untranslated short-form videos or neologisms into their native language, or correct awkward nuances in sentences initially translated by AI.
- Multiple users conduct cross-validation (Consensus), processing this into the most advanced form of an RLHF (Reinforcement Learning from Human Feedback) dataset.

(3) Chat-to-Earn (Natural Language Conversational Corpus Collection):

- Users engage in conversations with emotion-recognizing AI avatars, 'He & She', under specific given role-playing situations.

- The 'Conversational Corpus with a continuous flow of context' collected through this process is the highest-grade data traded at top prices for fine-tuning Large Language Models (LLMs).

(All data is strictly de-identified and anonymized with the explicit consent (Opt-in) of the users, in strict compliance with international privacy laws such as GDPR.)

4-5. Multilingual Expansion Strategy

MYPOOL has established a phased service roadmap, expanding the range of learning languages over the next three years based on its domestically verified multilingual learning platform.

- **2026 (Phase 1):** Advancement of the curriculum and AI learning functions for all currently offered languages, including English, Chinese, Japanese, Spanish, Vietnamese, and French. Expansion of the domestic user base and strengthening platform stability.
- **2027 (Phase 2):** Launch of Bahasa Indonesia and Thai, which have high practical demand due to Korean companies' expansion into Southeast Asia. Expansion of B2B education partnerships specialized in the Asian region.
- **2028 (Phase 3):** Launch of German and Italian, which have steady demand for professionals, study abroad, and specialized learning. Expansion into a global multilingual learning platform and entry into the premium education market.

The GANADA TOKEN ecosystem plans to expand into a multilingual learning platform based on its success in the Korean education market, establishing the following phased service launch plan.

- **2026 (Phase 1):** Focus on Korean (Korean) service. Platform stabilization and establishment of the L2E ecosystem foundation, expansion of market share among Korean language learners at home and abroad.
- **2027 (Phase 2):** Launch of English and Chinese. Adding English, which has high global learning demand, and Chinese, a massive market, to expand the service scope to Western and South American markets.
- **2028 (Phase 3):** Launch of Spanish and French. Adding Spanish, which has a high number of users, and French, a major European language, to leap forward as a comprehensive language learning platform covering the global top 5 languages.

4-6. Membership Growth Forecast (5-Year Prediction)

MYPOOL aims to secure 4 million cumulative members within 5 years, and GANADARA aims for 30 million, with the estimated member distribution by learning language and region as follows.

<MYPOOL 5-Year User Growth Forecast (By Learning Language)>

	2026	2027	2028	2029	2030
English	267,000	600,000	744,000	930,000	1,120,000
Chinese	172,000	386,000	478,000	598,000	720,000
Japanese	114,000	257,000	319,000	398,000	480,000
Spanish	95,000	214,000	266,000	332,000	400,000
Vietnamese	58,000	129,000	159,000	199,000	240,000
French	57,000	129,000	159,000	199,000	240,000
Indonesian	0	170,000	212,000	266,000	320,000
Thai	0	107,000	133,000	166,000	200,000
German	0	0	107,000	133,000	160,000
Italian	0	0	80,000	99,000	120,000
	763,000	**1,992,000**	**2,656,000**	**3,320,000**	**4,000,000**

<GANADARA 5-Year Estimated Membership (By Learning Language)>

	2026	2027	2028	2029	2030
Korean	1,000,000	3,000,000	6,000,000	8,500,000	10,000,000
English	-	500,000	2,500,000	5,000,000	7,500,000

5. GANADA TOKEN: Tokenomics

5-1. GANADA TOKEN Overview

The economy of GNDK is a Dual-Engine deflationary model where two massive capital flows—users' 'learning payments' and global B2B companies' 'data purchase funds'—drive up the token's value. Furthermore, it is mathematically precision-engineered to perfectly protect the value of user rewards against external market volatility and generate long-term scarcity. The GANADA Token serves as the base currency for the MYPOOL and GANADARA language learning app ecosystems. It is designed to solve the issue of low learning persistence in the existing education market and to support the education of people in developing countries and low-income groups.

Going beyond providing simple rewards, the GANADA Token presents a next-generation L2E (Learn-to-Earn) model that verifies users' actual language skill improvements through an AI-based Learning Proof Engine and distributes fair rewards proportional to their progress. Thus, it aims to build a Web3 education ecosystem where learning activities within the MYPOOL and GANADARA apps (such as attendance, taking courses, quizzes, practice, content creation, etc.) are quantified, enabling learners to earn practical token rewards.

The token symbol GNDK integrates ‘GANADA’ (the Korean alphabet) with ‘K’, representing Korean identity and K-Culture. This nomenclature clearly illustrates the project’s identity: scaling the global value of Korean culture through a Web3 platform rooted in a language-learning ecosystem.

Token Information

Item	Content
Token Name	GANADA TOKEN
Token Symbol	GNDK
Token Base	Solana SPL Token
Total Supply	1,000,000,000 GNDK (Fixed at 1 billion, no additional minting permanently)

5-2. Problems GANADA TOKEN Aims to Solve and Solutions

1) Lack of Motivation: Over 80% of online language learners give up within an average of 4 weeks. Solution: L2E Token Reward.

2) High Cost Barrier: The cost of online language learning is a burden for low-income groups and people in developing countries. Solution: Learning fee payment with rewarded tokens.

3) Platform Monopolization Structure and Content Limitations: In existing language platforms, most content is provided by the platform, and learners cannot create content, leading to content limitations for learners based on diverse native languages. Solution: Solved by highly proficient Korean speakers based on diverse native languages providing learning tips and content to users of their respective native languages.

5-3. GANADA TOKEN Features

1) Reverse Token Based on Real Service

Most cryptocurrency projects proceed in the order of announcing the white paper first and then developing the service. However, GANADA TOKEN is a Reverse Token issued based on the already completed MYPOOL·GANADARA platform.

- **Stable Revenue Model:** Diversified revenue sources such as subscription services and B2B corporate education.
- **Clear Use Cases:** Actual use cases exist, such as learning mining and program purchases.
- **Sustainable Ecosystem:** Continuous demand guaranteed due to the nature of the education industry.

2) Proof of Learning (PoL) Mining

The biggest feature of GANADA TOKEN is the Proof of Learning (PoL) mechanism. While existing cryptocurrencies are mined through Proof of Work (PoW) or Proof of Stake (PoS), GANADA TOKEN is

mined through actual learning activities.

Learning Proof Mining Process

1. Learner performs learning activities such as watching lectures, solving quizzes, and speaking practice on MYPOOL·GANADARA.
2. The AI system verifies the learning activities and evaluates the learning achievement.
3. Points are awarded based on the learning achievement.
4. Points are converted to GANADA TOKEN (1 Point = X GNDK, the exchange rate is adjusted according to market conditions).
5. GANADA TOKEN is used for MYPOOL·GANADARA service purchases or traded on an exchange.

Advantages of Learning Mining

- **Learning Motivation:** Continuous learning is induced because rewards are received upon studying.
- **Objective Performance Measurement:** Fair reward system established through AI-based learning evaluation.
- **Global Accessibility:** Anyone can acquire GANADA TOKEN simply by learning, anywhere.
- **Virtuous Cycle Structure:** Virtuous cycle ecosystem of Learning → Reward → Re-learning.

5-4. Token Economy

The GANADA TOKEN ecosystem operates a systematic reward system that fairly distributes tokens based on user contribution.

1) Learning Mining Reward

The consistent learning activity of the learner itself is the structure of mining.

- **Daily Goal Achievement:** Basic GANADA TOKEN rewards are paid upon completing the daily set learning goal.
- **Streak Bonus:** An additional bonus multiplier is applied as the number of consecutive learning days increases without interruption, encouraging habit formation.

- **Achievement Reward:** Additional rewards in the form of performance bonuses are paid upon leveling up, acquiring badges, or achieving high scores in quizzes.

2) Community Activity Reward

Rewards users who contribute to ecosystem activation through active community participation.

- **Knowledge Sharing:** Rewards are paid upon receiving 'likes' or 'selection' for answering other learners' questions or sharing useful learning tips.
- **Interaction:** Provides rewards based on activity scores to users who participate in healthy communication and encouragement activities within the community.

3) Tutor and Creator Reward (Creator Economy)

Shares revenue with providers who produce high-quality content.

- **Content Revenue Distribution:** A certain percentage of the platform's revenue is distributed as GANADA TOKEN based on the views and learner response to the created short-form/long-form lectures or quiz content.
- **Tutoring Activity:** Settlement of tuition fee revenue is received as GANADA TOKEN when conducting mentoring or live classes.

4) GANADA TOKEN Use Cases

- **MYPOOL·GANADARA Service Purchase:** All paid learning services such as monthly subscriptions and annual passes can be paid with GANADA TOKEN, and special promotions and discount benefits are offered.
- **Premium Feature Utilization:** Used as fees for premium services such as tutor mentoring, live classroom participation, and advanced AI features.
- **Sponsorship and Ecosystem Contribution:** GANADA TOKEN can be directly sponsored (Super Chat style) to creators or tutors who produce excellent content, aiding the virtuous cycle of the ecosystem.

5-5. Strong Price Defence : The Arbitrage Mechanism

Within the app, 1 GNDK always maintains a payment value of $1. If the price of GNDK falls below $1 on external exchanges (DEXs), hundreds of thousands of paid learners will create strong voluntary Buy Pressure by purchasing GNDK at a discount on the exchange instead of using credit cards to pay for course subscriptions, 1:1 tutoring, and K-Culture merchandise.

1) Creating Buy Pressure: If the price of GNDK on external decentralized exchanges (DEXs) falls below $1, paying subscribers of MYPOOL and GANADARA will have a strong incentive to buy GNDK cheaply on the exchange to pay for in-app services instead of using their credit cards.

2) Securing Downward Price Rigidity: The continuous payment demand generated by over 100,000 active paying subscribers constantly absorbs the circulating supply on exchanges, creating a self-sustaining buy pressure that drives the price toward the $1 level.

5-6. Earn : Dual Reward and Dynamic Halving Model

1) Basic L2E (Learning Reward) : To prevent the depreciation of token value, the reward distribution system is strictly designed. Rewards are exclusively targeted at 'paying subscribers' whose KYC and payments have been thoroughly verified. A 'Dynamic Halving' mechanism is applied, where the earning limit per user decreases as the global user base grows. This provides the greatest benefits to Early Adopters, inducing explosive growth within the ecosystem.

- **Phase 1 (Initial Settlement ~ 100K users):** Maximum earning limit of 70 GNDK per user annually.
- **Phase 2 (Growth Phase ~ 1M users):** Maximum earning limit of 40 GNDK per user annually.Expansion of self-study and instant feedback structures
- **Phase 3 (Expansion Phase ~ 10M users):** Maximum earning limit of 15 GNDK per user annually.
- **Phase 4 (Global Settlement ~ 100M users):** Maximum earning limit of 3 GNDK per user annually.

To eliminate the burden of gas fees for users and maximize User Experience (UX), the reward distribution method initially adopts a Direct Transfer approach from the eKYSS central server directly to the users' wallets.

2) Premium D2E (AI Data Bounty): By participating in 'Data Bounty' missions deposited into the ecosystem by AI companies to collect specific language data (e.g., 10,000 hours of Korean pronunciation by Vietnamese speakers), users can earn additional rewards beyond the basic limit.

5-7. Burn & Recycle : Infinite Ecosystem Lifespan

1) Structural Burn of Unexchanged Points

- Users earn points through learning and reward activities on our platforms (MYPOOL, GANADARA).
- Structurally, users must reach a certain point threshold to exchange these points for GANADA Tokens.
- Points falling short of this threshold cannot be exchanged. In this case, the foundation plans to burn all tokens allocated to these unused points to prevent them from entering circulation.

2) Service Revenue Burn (Sink Mechanism) GNDK used by users for service payments is collected into the ecosystem via smart contracts and automatically distributed as follows:

- **50% Permanent Burn:** Permanently removed from the circulating supply. As payment activity increases, deflation accelerates, driving up the intrinsic value per token.
- **50% Recycle:** Returned to the Ecosystem Reward Pool.

❈ **Long-term Survival Simulation:** By combining the strict 'annual earning hard cap (halving)' with the '50% recycle logic,' the initially allocated 300 million reward pool achieves perfect mathematical stability, ensuring it will not be depleted even in a future with 100 million active users.

3) Buyback and Burn from Operating Profits

- As platform revenue increases through marketing and business expansion, we plan to allocate a certain percentage of net profits to buy back GANADA Tokens from the market and burn them.

4) Partnership and Commerce Payment Burn

- We are currently collaborating with partners such as the Korea Medical Tourism Association to enable users to purchase physical goods (e.g., K-Beauty cosmetics) using GANADA Tokens.
- A certain percentage of the tokens used during the payment process for these product purchases will be burned. (Note: These token burn mechanisms are specified in the whitepaper and will be continuously updated and strengthened to ensure security and sustainability.)

5) Buyback & Burn from B2B Data Sales Revenue

- MYPOOL and GANADARA sell the collected high-quality multimodal datasets to global AI Big Tech companies and research institutions using fiat currency (e.g., USD).

- **Burn 40% of Revenue:** The foundation utilizes at least 40% of the revenue to directly purchase GNDK at market price on exchanges (Buyback) and permanently burns them (Burn).
- **Recycle 30% of Revenue:** 30% of the revenue is used to purchase tokens from exchanges, which are then recharged into the D2E 'Data Bounty Reward Pool' for users.
- This completes an extreme deflationary cycle where massive external B2B capital dries up the token's circulating supply and causes its value to skyrocket.

5-8. Expanding Token Utility (Ecosystem Growth)

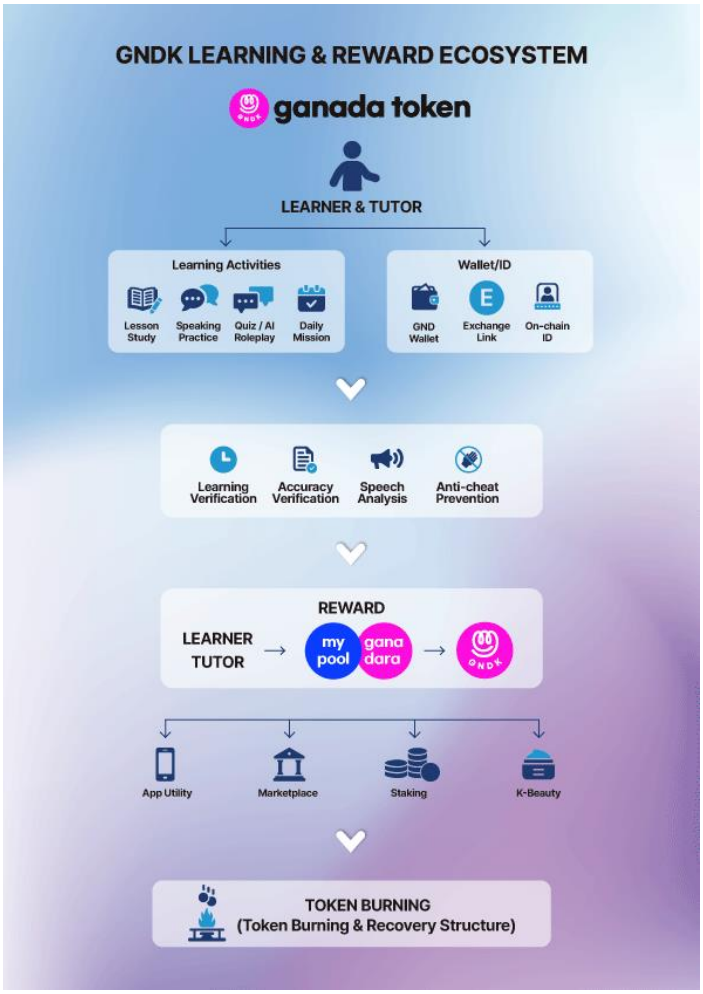
We are actively making efforts to increase the intrinsic demand for the GANADA Token, moving beyond mere speculation.

- **5% of the total token supply is allocated to "Partners."**

- This allocation is not intended for short-term sell-offs; rather, it serves as a strategic fund to secure major service providers (e.g., cosmetic brands, hospitals, and K-Culture services) as partners.

- By leveraging this allocation to secure partnerships, we aim to position the GNDK token as a versatile, multi-purpose currency that users can utilize to pay for various K-Culture products and services.

<MYPOOL·GANADARA Learning & GANADA TOKEN Reward Ecosystem>

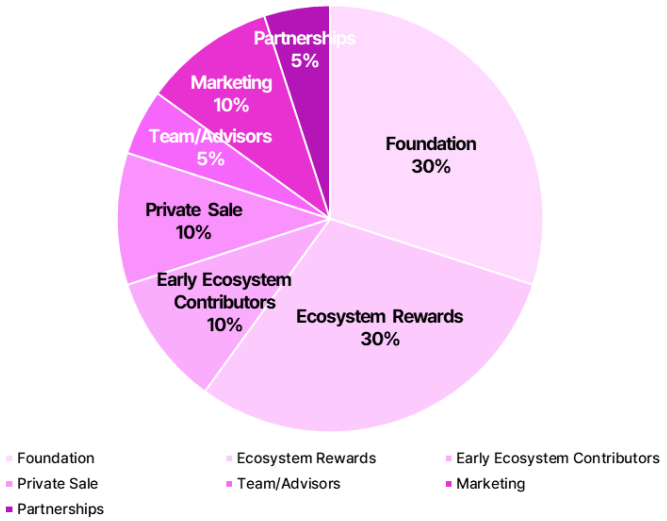


5-9. Token Issuance Volume and Distribution Structure

The total supply of the GANADA Token is 1,000,000,000 GNDK (1 billion). To completely prevent early market dumping, the ecosystem reward pool is controlled by smart contracts, and strict lock-ups are applied to the team and partner allocations. The token supply and circulation structure are allocated as follows:

Category	Description	Percentage	Quantity (GNDK)
Total Supply	Total token issuance	-	**1,000,000,000**
Token Allocation			
Foundation	Support for ecosystem operations and future development (1-year lock-up, 2-year linear vesting)	25%	250,000,000

Ecosystem Rewards	Learning mining and content creation rewards for paying subscribers (Subject to an annual hard cap of max 70 tokens per user and dynamic halving)	30%	300,000,000
	Charitable donations and social contribution	5%	50,000,000
Early Ecosystem Contributors	Initial key investors in eKYSS and Crates (1 year lock-up, 1 year linear vesting)	10%	100,000,000
Private Sale	GNDK Early investors (1 year lock-up, 1 year linear vesting)	10%	100,000,000
Team/Advisors	Core personnel retention (1-year lock-up, 2-year linear vesting)	5%	50,000,000
Marketing	Marketing activities	10%	100,000,000
Partnerships	Collaboration with Hallyu (Korean Wave) content, IP, and partner companies	5%	50,000,000
Total		**100%**	**1,000,000,000**



Important Notes

- The distribution ratio may be adjusted based on changes in the technical, legal, and market environment of the blockchain industry.
- Prior written notice will be given at least 14 days before any adjustment to the distribution ratio.

5-10. Governance & Security Policies (Trust & Security)

Permanent Renunciation of Mint Authority: Immediately following the TGE (Token Generation Event) of 1 billion tokens, the authority to mint new tokens will be permanently renounced (burned) on the smart contract. The risk of arbitrary token issuance by the foundation is exactly 0%.

- **Implementation of Emergency Pause Feature:** To prepare for potential hacking or exploitation incidents, a minimal security measure (Pause feature) allowing the temporary suspension of the token contract will be implemented to protect user assets.
- **Progressive Decentralization of Authority:** The management authority over the ecosystem reward pool will initially be led by a central server (Direct Transfer) to ensure early operational stability. However, after surpassing 50,000 DAU (Daily Active Users) and achieving system stability, this control will be transferred to a Multi-sig and DAO governance structure.

6. Team Members

6-1. Executive Team

Joseph Lee, Chairman of the Foundation

•Current) CEO of eKYSS Global (HK) and eKYSS
•Bachelor of Business Administration, Hanyang University
•Master of Journalism, Media and Communication, Yonsei University
•Founded Warwick English Academy, Gunpo Global Education Center, Social Public Interest English Center
•Affiliated professor of IAB at Department of Business Administration, Hanyang University

Yunny Chun, COO

•Currently) Executive Director of Operations, Head of Content Experience Division at eKYSS
•Master of English Education, Oklahoma City University•TOEIC lecturer at PAGODA Academy
•Affiliated professor of TOEIC at Hankuk University of Foreign Studies

Dongwook Kwon, CTO

- Currently) Executive Director of Development at eKYSS
- Bachelor of Computer Science, Yonsei University
- CEO of NeoulSoft
- Technical Project Manager and Development Team Leader, NCSOFT

Jieun Han, CMO

- Currently) Executive Director of Marketing at eKYSS
- Bachelor of Newspaper & Broadcasting, Yonsei University
- Magazine editor at Sigongsa and Seoul Culture Publishers
- Chief editor at KBS Journal and CHARMZONE

4-2. Co-founders & Advisors

John Souh

- Currently) Apple Senior Director (Technical Operations)
- Bachelor of Mechanical Engineering, Texas Tech University
- Valence Technology - Director, Operations

Anthony Choi

- Currently) Senior lawyer at Sejong Law Firm (Global Investment, M&A)
- Bachelor of Hispanic Language and Literature, Seoul National University, Georgetown Law School in the U.S.
- Lawyer for M&A investment consultation at Yulchon LLC
- Simpson Thacher & Bartlett LLP, American lawyer at Kim & Chang law firm

Jinho Kim

•CEO, Cashtree (Indonesia)
•Founding Member, Neople
•Head of Operations, Coinone Indonesia

Jinguk Kim

•Chairman of Korea Medical Tourism Promotion Association
•CEO of B&Viit Bright World Eye Center Ophthalmology
•Pioneered the first LASEK and presbyopia surgeries in Korea
•Adjunct Professor in the Department of Ophthalmology at Yonsei University College of Medicine

Donghwan Lee

•Currently) CEO of YouTube Channel 'Lee Dong-hwan TV'
•CEO of LD Health Co., Ltd.

Sungmin Kim

•Currently) Professor in the Department of Sports Science at Hanyang University
•Director of Hanyang University's Artificial Intelligence Muscle Center
•BK Four Human-Tech Convergence Education Project Group
•Recipient of the 2019 CES Innovation Award

Sunghoon Kim

•Currently) CEO of STC Tax Corporation Co., Ltd.
•Tax Review Board Member for the National Tax Service
•Supervision Committee Member for the Seoul Regional Tax Association
•National Tax College
•Worked at the National Tax Service (12 years)

6-3. Company Overview

GANADA TOKEN Issuance Foundation: eKYSS Global Limited.

Category	Details
Company Name	eKYSS Global Ltd.
Establishment Date	March 8, 2019
주소	FLAT C TOWER 6 37/F THE VISIONARY NO YING HEI ROAD TUNG CHUNG, HONGKONG
Address	Joseph Lee
Business Area	Education

MYPOOL·GANADARA App Development and Operator: eKYSS Co., Ltd.

Item	Details
Company Name	eKYSS Co., Ltd.
Establishment Date	April 17, 2012
Address	2F, 6, Seolleung-ro 119-gil, Gangnam-gu, Seoul
CEO	Joseph Lee
Business Areas	Smart learning language app, e-learning education, publishing, etc.
Capital	3,198,500,000 KRW (approx. 3.2 billion KRW)
Certifications	Medium-sized enterprise certification, Management Innovation Small and Medium Business Main-Biz certification, Smart learning corporate research institute establishment

7. Roadmap

7-1. Q1~Q2 2026: Infrastructure Setup & Integration into the Solana Ecosystem

- Development of Solana-based smart contracts (SPL Token) and completion of external professional security audits.
- MYPOOL & GANADARA 3.0 updates and integration of the $1 Peg payment system.

7-2. Q3~Q4 2026: TGE & Global Liquidity Bootstrapping

- **TGE (Token Generation Event)** and GANADA Token issuance.

- Initial listing and Liquidity Pool (LP) provision on major Solana DEXs (Raydium, Jupiter).
- Official launch of the L2E reward system (Phase 1: Max 70 GNDK halving schedule applied).
- **Launch of 1st Killer Feature:** Real-time Live Classroom & Real-time Translation Chat.
- **Launch of 2nd Killer Feature:** Development of AI Friends "He & She" (Emotion-recognition 3D avatars).
- **Launch of 3rd Killer Feature:** Development of AI content creation tools (Enabling creators to produce and monetize content using AI).

7-3. Q1~Q2 2027: Ecosystem Expansion & CEX Entry

- Achieve the KPI of surpassing 1 million users and initiate Decentralization Phase 1.
- Pursue sequential listings on global Tier-1 / Tier-2 Centralized Exchanges (CEXs) based on secured on-chain trading volume and transaction data.
- Establish an income-guaranteed content creation environment through the expansion of global creator partnerships.

7-4. Q3 2027 & Beyond: Global Market Leadership & Multi-chain Expansion

- Expand to Base / Ethereum / BNB multi-chain ecosystems using LayerZero technology upon achieving target KPIs (DAU, Trading Volume).
- Surpass 1 million active members for MYPOOL and 10 million active members for GANADARA.

8. Disclaimer and Risk Warning

8-1. Legal Notice

This Whitepaper has been prepared solely for the purpose of providing information about the GANADA TOKEN (GNDK) project and is not intended as an investment solicitation, subscription offer, sales proposal, or investment advice.

Individuals considering the purchase of GANADA TOKEN must fully understand and agree to the following points before participating.

8-2. Investment Risk Warning

- **Price Volatility:** Cryptocurrency prices are highly volatile, and you may lose the entire principal amount invested.
- **Regulatory Uncertainty:** Cryptocurrency-related laws and regulations are constantly changing in various countries, and changes in regulation may restrict the use and trading of GANADA TOKEN.
- **Technical Risk:** Technical issues such as smart contract bugs, hacking, or network failures may occur.
- **Project Uncertainty:** The roadmap and plans listed in this Whitepaper are preliminary and may be altered or delayed due to market conditions, technical constraints, or the regulatory environment.
- **Exchange Listing Uncertainty:** Exchange listings may be delayed or become impossible depending on the exchange's policy, market conditions, and legal requirements.

8-3. Limitation of Liability

- eKYSS Co.,Ltd. and the GANADA TOKEN project team shall not assume any legal responsibility for losses incurred due to investment decisions based on the information provided in this Whitepaper.
- The contents of this Whitepaper are subject to change without prior notice; please verify the latest information through the official website and official channels.
- Tax matters related to the purchase and holding of GANADA TOKEN are governed by the tax laws of each respective country and are the sole responsibility of the purchaser.

8-4. Investor Confirmation

Please confirm the following before purchasing GANADA TOKEN:

- Confirm that the purchase and holding of cryptocurrency are legal in your country of residence.
- Fully understand and agree to all contents of this Whitepaper.

- Invest within the limits of what you can afford to lose.
- Seek advice from professionals (legal, tax, financial) if necessary.

8-5. Prohibited Persons

The purchase of GANADA TOKEN is prohibited for the following persons:

- Minors (as defined by the laws of their respective countries).
- Residents of countries or regions where cryptocurrency transactions are prohibited.
- U.S. residents (separate confirmation required for compliance with SEC regulations).
- Individuals with concerns regarding violations of Anti-Money Laundering (AML) or Counter-Financing of Terrorism (CFT) laws.

A World Where Your Learning Holds Value

Created by the GANADA TOKEN.

Unauthorized reproduction and duplication of all content contained in this White Paper are strictly prohibited.
